

Contract Manufacturing

Dispersions and liquid components

Your formulation is ready, but production is a bottleneck?

Whether you're facing limited capacity, scale up challenges, or equipment constraints, we take over the manufacturing of your specialty chemical products – delivered reliably, flexibly, and exactly to your specifications. As an experienced partner in polymer chemistry, we translate your formulation into robust, dependable production, from pilot batches to full-scale manufacturing.

Why customers choose us:

Fast transition from lab to production

We bridge the gap between development and manufacturing with both pilot-scale capabilities and industrial infrastructure.

Flexibility that fits your project

Batch sizes from 50 kg to 15,000 kg. Exactly what you need.

Less work for your team

We handle sourcing, production, filling, and logistics, so you can stay focused on your core business.

Consistent quality

Proven in demanding industries such as automotive, industrial manufacturing, composites, and construction.

Confidentiality comes standard

Your formulations and data are protected through clear processes, controlled access, and strict confidentiality.

Your partner for liquid polymer systems

Our production capabilities

We manufacture according to your formulation.
Reliably, consistently, and at the required scale.

Chemical processes

- Emulsion polymerization
- Polymer functionalization
- Prepolymer synthesis
- Neutralization and salt formation
- Dispersion and emulsification

High-viscosity mixing capabilities (up to approx. 500 Pa·s)

- Polymer blending
- Incorporation of crosslinkers, tackifiers, fillers, stabilizers, and more

Typical products we manufacture

We produce a wide range of specialty chemical products, including adhesives, binders, coatings, sealants, and additives.

Our expertise in adhesives includes:

- 1C and 2C polyurethane adhesives
- Epoxy and silane-epoxy adhesives
- UV-curable adhesives
- Water-based dispersions such as acrylates, polyurethanes, polyvinyl acetate (PVA), vinyl acetate-ethylene (VAE), ethylene-acrylic acid copolymers (EAA), and more

From lab to full-scale production

We support your scale-up from early trials to stable, ongoing production. Our pilot reactors and mixers (65 L / 160 L) enable realistic testing under industrial conditions.

More than just contract manufacturing

- Sourcing of custom raw materials and packaging
- Engineering support from pilot to full-scale production
- Filling, packaging, and labeling
- Quality control in accordance with industry standards
- Logistics support

Our polymerization, pilot, and mixing plants provide the right infrastructure for manufacturing your specialty chemical products.

Your know-how stays protected

We treat your formulations and project data with the highest level of confidentiality. Clear processes, controlled access, and NDAs are standard practice.

Your partner for liquid polymer systems: from formulation to full-scale production

Let's talk about your project

We'll review your needs and explore how we can support your scale-up or production – no obligation.
